MICHIGAN

FROST PROOF

C. N. Kelley of Ingham County, Michigan, a plant grower for 20 years, found this plant four years ago among his seedlings. The writer and many other nursery men tried to obtain some of these plants for trial, but he would not part with even one plant. The writer has watched these plants and the results for three years. Mr. Kelley passed away last June, leaving his business to a son, who asked me to introduce his new berry. I received this news too late to send out any plants to other dealers or Experiment stations for testing. This is not an old variety newly named, but something different. It has a plant habit something like Premier, but makes few more plants, produces the largest fruit I have ever seen. Very firm, making it a good shipper. Quality equal to Premier, but darker in color. Shape much like Dunlap.

The strange thing about this new variety is the blossoms are pink. I watched the fruiting and sale of fruit from one acre last season. Mr. Kelley obtained about 2 cents per quart more for the variety than we could for Premier or any other variety. Grocers told me Frost Proof would stay in their store for two days and still be good. The reason Mr. Kelley called it Frost Proof was because it withstood late frosts when others were killed. We invited nearby growers to see this new variety at fruiting time. Everyone said, "Sure is a wonder." "Never saw such large fruit," and many other like remarks. Not one failed to leave an order running from 500 to 2,000 plants. Worthy of trial. See prices Page 11.

NEW GEM—EVERBEARING

Fruited the past season for the first time. The plants made a vigorous growth, producing runners quite freely, with a type of growth similar to Dunlap. The fact that Gem makes a good plant row and produces berries as large as Mastadon should make it a winner. Our plants were set a trifle late; however, they averaged to make twenty plants to every one set. They do not make large plants like Mastadons, but do make a well rooted, strong, vigorous medium size plant that produces plenty of large, fancy berries equal in size to Mastadon. The berries average large in size, are light in color, very showy and attractive and firm enough to ship. The quality is good.

The writer was much surprised to learn that such large, fancy fruit could be produced on medium size plants. Set side by side with Mastadon, the Gem produced the most fruit. Like the writer, you will be surprised at the results obtained from Gem if you plant them. A good one to plant for profit. This variety originated in Michigan.

Early Planting Brings Best Results

STRAWBERRIES AND RASPBERRIES

Are a good money crop. We believe in them. We will not pretend to say that all growers everywhere make money every year, but we do believe that year in and year out, strawberries and raspberries, under good conditions, will prove among the best, if not the very best money crop you can grow.

YOUR SUCCESS

Your own intelligence will tell you that your success depends primarily on one thing: "The quality of stock you plant." Getting the right start with the right stock means more to you than all other factors combined.

YOU WOULD NOT EXPECT

to succeed in the poultry business or the dairy business with scrub stock, and the same principal applies in fruit raising. Each fruit plant is a living, breathing organism with inborn and inbred characteristics that govern the quality and quantity of fruit it will produce for you. Proper methods bring good results. We have no "key" or secrets by which we can help you unlock the doors to Berry Profits. Our suggestions for selecting and preparing the land, setting and cultivating of the plants, are just good common sense, which any grower might eventually work out for himself. Don't hesitate to write for special information. We will gladly help if we can.

THE NEW VARIETIES

the past season was very favorable for berry growers, plenty moisture and good crops with better prices. Of the new sorts we were much pleased with Dorsett and Fairfax,—they sure are winners. The new Gem Everbearer sure was a big surprise to all of us. They produced such large, beautiful berries that brought a premium price. Unlike Mastodon, they make plenty plants. After fruiting Chief Red Raspberry another season, we think so well of it we will plant them heavy for fruit. The fact they ripen 10 days earlier than Latham makes them a winner. Chief picked 25 per cent more fruit in 1935 for us than Latham. Act wisely and try them.

We wish you and yours a Prosperous Year in 1936. As always, we will be glad to serve you to the best of our ability when you entrust your orders with us.

Sincerely,

E. W. POTTER.

INSTRUCTIONS TO PURCHASERS

ORDER EARLY

It will insure you getting the varieties you want and it will help us to get your plants shipped promptly when you want them.

PLEASE remit by P. O. Money Order, Express Order, Registered Letter or Bank Draft.

LOST ORDERS—

All orders are acknowledged by postal card same day received, but if you should not hear from us in a reasonable length of time after sending an order, PLEASE WRITE PLAINLY, giving full particulars, NAME and ADDRESS.

Once in a while an order is lost, but it usually is caused by the customer failing to give the full address. Therefore, PLEASE WRITE PLAINLY, especially your name.

TERMS: Payment must be made before shipment of plants. If not convenient to remit entire amount when order is sent, remit not less than one-fourth of the amount of the order and your order will be booked and held for you and you can remit the remainder when convenient, before shipment of plants.

WE GUARANTEE the safe arrival of plants in good condition if sent by mail or express by May 1st.

WE TAKE the greatest care to have all plants true to name and seldom ever have a complaint, but should any prove otherwise than represented, we will not be responsible for any amount greater than actually paid us for the plants.

CLAIMS, if any, must be made on receipt of plants when they will be carefully examined, and if just, made satisfactory.

FOR OUR RESPONSIBILITY address with stamp the Peoples Bank, Leslie, Michigan, postmaster, express agent, or any official, professional or business man of the same place.

HOW TO GROW STRAWBERRIES

Strawberries are grown successfully on light, sandy soil, and on heavy, clay soil, although—like most other crops—they respond very quickly to fertile, well-drained soils that are full of humus.

In selecting a soil, keep in mind that any good garden soil will produce Strawberries. Sod land should be avoided on account of white grubs and cut worms.

If planting a large acreage, it is well to select a field that has been planted to some hoed or cultivated crop, where grass and weeds have been kept down and not allowed to go to seed.

Clipping the roots is not necessary, if you can get the roots into the soil without doubling them up.

WE MAINTAIN OUR GRADE by a careful selection of stock plants and right method of propagation from year to year, that tend with such a soil to produce stock of the greatest health and vigor, striving for the ideal fruiting row and perfect fruit from any plants that may be left unsold.

OUR PLANTS ARE FRESH DUG as wanted, nicely trimmed, ready for planting, carefully re-sorted and tied in bunches of 25; roots washed in cold water if necessary to make them clean, and packed with live moss in new handle baskets lined with oil paper, or in light ventilated crates, in such a manner that we guarantee safe arrival in good condition by express or mail to all parts of the United States. Plants by freight at buyer's risk.

TRUE TO NAME. We take great pains to have stock true to name and hold ourselves ready upon proper proof to refund money or replace any that prove untrue; but it is mutually agreed that we shall not be liable for a greater sum than amount paid for such stock.

SUBSTITUTION. Early in the season we have everything listed in this catalogue, but late in the season usually sell out some varieties. In case we are out of varieties ordered, please say if we shall substitute some variety of same season, suitable for your locality. We always notify customer if we have time to receive your answer before you wish plants shipped, but in case you do not request us to substitute we shall return the amount for the plants we do not have.

OUR PRICES AVERAGE LOWER than can be found elsewhere, when quality of stock and guarantee conditions are considered. Our references for responsibility are ample. You take no risk whatever. See elsewhere a certificate of health from the State Department of Agriculture. We invite investigation at all times.

HOW TO GROW STRAWBERRIES

Plant as early as possible—soon as weather will permit getting ground ready.

Be sure to order early. Early setting pays big. The plants start quicker, grow better and make better beds than late set plants. Take pains in setting. It pays.

We plant rows four feet apart. Plants fourteen to eighteen inches in the row.

Set plants on arrival, if possible. Dip the plants in water just before planting.

Plants should be cultivated and hoed as soon as they start growing.

It Is Very Important at the first hoeing to uncover the buds of any plants which have been planted too deep.

Cultivate often. Keep the weeds out, and you will be pleased with results.

CULTURAL DIRECTIONS

MATING

All strawberry blossoms are either staminate—also called perfect—or pistillate, generally called imperfect.

The imperfect varieties, which are marked (Imp.) in catalog, should have a perfect variety, marked (Per.) set every third or fourth row to properly pollenate the blossoms of the imperfect sorts.

There seems to be a mistaken idea with some that this mixing of varieties is necessary with the perfect as well as the imperfect sorts, but this is not so. The perfect are self-pollinating and bear as well if set by themselves.

TIME TO SET PLANTS

Early Spring is the logical, natural, most successful and satisfactory time to set Strawberry plants. So don't neglect setting some plants this Spring, thinking you can make it up by early Fall planting. It can't be done.

How early? Just as soon as weather permits getting ground ready.

We are anxious at all times to please our customers, who in some way fail to get their plants in the spring, by sending them a few in the fall. However, spring is by far the best time to plant strawberries. Spring planting is preferred because weather conditions are more favorable and because the plants come into bearing the next season. Fall set plants have to go through two winters before they start to fruit and the effect of winter is never beneficial to their plantation. To those who are unfortunate and do not obtain their plants in the spring, we will gladly supply their needs at double the price in catalog.

NORTHERN GROWN PLANTS

A strawberry is never in so prime a condition as when fully grown, matured and dormant. Our friends in the South have recognized that our Northern grown plants are safer to set, because of their more dormant condition on arrival, while commercial growers in the North and West would not think of setting Southern stock of a more advanced growth. We also hold that while strawberry will grow and thrive nearly everywhere, the North is its natural home, where it fits the conditions more naturally for a higher development.

THE DESCRIPTION of the different varieties is as they have done with us at fruiting time. Varieties that we have not fruited we have given originator's description, or others, that we consider best authority.

Be sure to order early enough so that plants can be right at hand as soon as your ground is ready. Early setting pays big—the plants start quicker, grow better and make better beds than plants set late.

WE SHIP PLANTS

to Southern customers during mild weather any time after they receive this catalog, and to the North as late as the 15th of May, but for all sections it is advisable to order early and name date of shipment as early as you can use the plants. Plants shipped early have less foliage, can be packed lighter, and if planted almost always do well.

OUR SHIPPING SEASON

begins with the Southern orders, as soon as frost is out of the ground in spring, often in March. We aim to set out plants in early April. If ordered late in the season, it is always best to name a second or third choice in case a variety is sold out, or leave it to us, stating soil conditions and other particulars. We will do our best to please you, but order early and have plants come early, if you can.

REMOVING THE BLOSSOMS

Strawberry plants that are set out this Spring should not be allowed to bear fruit until the following spring. The blossoms should be pinched off, for to let them ripen fruit the first year would weaken the growth of the plants and is liable to kill them. Just as soon as you remove the blossoms your plant starts to work building up a root system. The heavy, vigorous root system is essential to enable the plant to come to its fullest possibilities of production.

PLANTS WE GROW

AROMA (Per.)

One of the old, reliable, late varieties. In many sections it still continues to be a favorite, in spite of the many new varieties that have been introduced. The fruit is large, bright red in color to the center and has a delicious flavor. Its firmness makes it a good shipping berry. Fair plant maker.

BLAKEMORE (Per.)

Originated with the U. S. Department of Agriculture. After fruiting this wonderful new variety again, we still have plenty of praise for it. We have reports that it did not do as well in some sections as it did with us, however, we harvested from our Blakemore a fine crop of firm, fancy fruit. The fruit holds up exceptionally good after picking. Extra good for canning on account of its firm flesh and solid centers. Good plant maker. Don't make a mistake by not trying Blakemore.

BELLMAR (Per.)

After fruiting this variety we do not hesitate to pass along the report that it sure did please us and pleased everyone who were fortunate enough to see it in fruit. This new sort sure did produce some fine fruit. The only thing that prevented us from planting this variety heavy for fruiting was shortage of plants. This new variety was originated by the U. S. Department of Agriculture and has the same parentage as Blakemore. The fruit is large, dark red and of fine quality. Plants are thrifty and make rows just right for fruiting. Our supply of plants is limited.

GIBSON (Per.)

Mid-season. This variety is being grown throughout our state very extensively as a market berry, because it produces large crops and is noted for its firmness, making it a good shipper. We find it just a little later than Dunlap. The Gibson is a large, dark red berry of good quality and flavor. Unlike some other varieties, it holds its size throughout the entire season. The plants are large, long rooted and will withstand much dry weather.

HARVEST KING (Per.)

Mid-season. This variety is reported as doing well in many sections. However, it has not come up to our expectations. It starts to ripen with Dunlap, and continues fruiting a long time. The berries are much the same shape as Premier, but darker in color. Medium to large size and of excellent quality. It has never made a large enough plant row to suit us.

CATSKILL (Per.)

A new mid-season variety, not fruited on our farm. It's an introduction of the New York Experiment Station and a cross of Marshall and Premier. It is a strong, vigorous grower, making plenty of large plants. Big claims are made by reliable growers, some saying the best mid-season sort. Reports of the behavior of Catskill indicate adaptability almost as wide as Premier. Try them.

DR. BURRILL (Per.)

Mid-season. Claimed to be an improved Dunlap. We find them very similar. It's a good variety, producing large crops of dark red berries of fine quality. The plants are medium in size, making a heavy plant row. Some claim it to be a little earlier than Dunlap.

PREMIER (Per.)

For many years the outstanding early variety. We have always put this variety in the list of TOP NOTCHERS and will continue to do so for the present. This variety is known for its handsome, glossy, rich-red color, large size, symmetrical shape—its delicious quality and as an immense cropper. Ripens before Dunlap. If Dorsett and Fairfax continue as they have started, we surely will plant them for early fruit in place of Premier. They are better plant makers.

PEARL (Per.)

Late. A wonderful new, extra-late variety. It can be depended upon to produce both quantity and quality. Because of its late blooming season, it is an ideal variety for frosty locations. It makes an ideal fruiting row. Berries are large, uniform, solid and red clear through . . . very attractive, with excellent flavor. This variety prolongs your season and increases your profits. Late berries always bring fancy prices. Try them.

KING WEALTHY (Per.)

Very late. There are several good late varieties, but none better—few as good. The fruit is large, handsome, well-shaped and dark-red. A wonderful shipper, because of its firmness. Plants large and long rooted. You will not be disappointed in this variety.

SAMPLE (Imp.)

Medium late. An old, standard variety, still popular in many sections of the Middle and Northern States. The plants are vigorous growers and productive. Berries are very uniform in shape—medium, firm, good size and attractive in appearance. The blossoms are imperfect. Pollenize with any perfect variety of same fruiting season.

SENATOR DUNLAP (Per.)

Mid-season. For more than twenty-five years this variety has been a big money-maker for commercial strawberry growers. It does well in any type of soil and in almost all sections of the country. Makes plants freely and produces enormous crops of dark red, rich, beautiful fruit. Often called "King of the Canners."

FAIRFAX (Per.)

Another early variety, originated by the Department of Agriculture and tested by us in fruiting last season. We have said for some time that Premier was the best early variety, and it has been—until we fruited Dorsett and Fairfax. The Fairfax does not make quite as many plants as Dorsett, but enough for a good plant row. This variety is a trifle darker at picking time than Dorsett plants—vigorous in growth, healthy and apparently free from disease. Fruit of high quality—very firm and will stand shipping. Makes more plants than Premier.

DORSETT (Per.)

After testing this new variety, originated by the U. S. Department of Agriculture, we find it a vigorous growing variety—under normal conditions producing a well matted row. It ripens about the same time as Premier, but produces a larger early crop. The fruit is usually conic shape—presenting a very uniform appearance. Color bright red, a little lighter than Premier, and does not become dark when over-ripe. Flavor mild, sub-acid; under normal conditions it is sweet and very pleasing. Some say best early variety known. Supply plants limited.

MASTADON (Per.)

This variety has stood supreme among the Everbearers for some time. Its one drawback, however, has been that it failed to make many plants. The fruit is larger than any other fall-bearing that we have tried, except Gem. The berries are handsome, firm enough to ship or haul a moderate distance to market. The plants are vigorous in growth and produce big crops of big berries. Don't forget, your Mastadon, if left to fruit, will produce a good crop in the early summer. Plants will always be high in price on account of not being extra good plant makers.

For best results with Everbearing Strawberries, good strong plants must be used and set early. Keep blossoms picked until July 1st to 15th.

RED RASPBERRIES

CHIEF. Best early, Red Raspberry. This is a new variety which has had sufficient testing in commercial fields to safely place it as one which is going to replace all other early varieties. It could rightly be called an Early Latham, because it resembles that variety in many ways. Equal in quality, it out-yields the Latham. Ten days earlier. Fruit is good, bright red, firm and of excellent quality. The Plants are vigorous in growth, perfectly hardy and seem to be resistant to mosaic.

LATHAM. This grand mid-season variety is winning favor wherever grown, its popularity having spread throughout the entire Middle and Eastern States. Every fruit grower in testing this wonderful variety reports favorably as to the large size and excellent quality of its fruit; its entire resistance to frost during the coldest winters and the enormous quantities of fruit it will produce. It is large, handsome and delicious from the beginning to the last picking.

CUTHBERT. An old and reliable variety. Does well anywhere. Not as large as Latham, but is noted for its wonderful quality. Fruits about same time as Latham.

NEWBURG

The new Red Raspberry was introduced by the New York Experimental Station. Their description says,—Berries are large, in fact, larger than those of any other sort; very firm. Color lighter than Latham, slightly coarse in appearance and a little better than Latham in quality. We have fruited them and find they are the largest of all the reds; quality better than Latham, firm and a very heavy cropper. Few days earlier than Latham.

BLACK RASPBERRIES

CUMBERLAND. King of the Black Caps. Sure money maker. No Black Raspberry is grown as extensively and none has made as much money for Fruit Growers as this wonderful variety. The plants are healthy, vigorous growers, throwing up stout, stocky, well branched canes. Fruit is large, rich black in color, firm and of highest quality. Ripens its fruit in mid-season and continues for three weeks. The Cumberland is less susceptible to disease than most varieties.

LOGAN

New variety. Ripens 10 days ahead of Cumberland, which allows the grower to get on the market ahead of other varieties. The new Logan produces immense crops of jet black berries as large as Cumberland. Does not crumble in picking; stands severe weather conditions without damage. Have only a limited number plants.

BLACKBERRIES

ELDORADO. We grow and sell only this one variety, because it is so much superior to all others. It is unusually hardy. Have never known it to winter kill or fail to produce a good crop. The berries are large, jet black and of excellent quality. They form in large clusters and ripen well together.

PURPLE RASPBERRIES

COLUMBIAN—The leading variety. Mid-season, vigorous and productive. Berries dark, fairly firm, with rich sprightly flavor.

OUR PLANTS ARE FRESH DUG AT SHIPPING TIME.

We would like the names of the people in your section who are interested in fruit growing. Kindly write their names on back of order sheet. Same will be appreciated.

TO COMPUTE AMOUNT OF POSTAGE

First ascertain the group in which you are located and then refer to list below, which will tell you the amount of postage to send.

Group 1: Central and Northern Michigan, Southeast Wisconsin, Northern Illinois, Central and Northern Indiana, Western Ohio.

Group 2: Balance of Wisconsin, Illinois, Indiana and Ohio.

Group 3: Minnesota, Iowa, Missouri, Arkansas, Kentucky, Tennessee, North Carolina, Virginia, West Virginia, Pennsylvania, New York.

Group 4: North Dakota, South Dakota, Nebraska, Colorado, Kansas, Oklahoma.

Group 5: Montana, Wyoming, Idaho, Utah, California.

- Group 1: Add 10c for each 100 Strawberry Plants.
- Group 2: Add 14c for each 100 Strawberry Plants.
- Group 3: Add 21c for each 100 Strawberry Plants.
- Group 4: Add 28c for each 100 Strawberry Plants.
- Group 5: Add 35c for each 100 Strawberry Plants.

25 Raspberry or Blackberry Plants take the same postage as 100 Strawberry.

Write for special prices on 3,000 or more plants.
